FRONT RANGE PASSENGER RAIL

PLANNING A NEW TRANSPORTATION OPTION FOR COLORADO'S FRONT RANGE

As communities grow, a new passenger train connecting Front Range Coloradans to jobs, housing options, opportunities, adventure and each other is on the horizon. Are you ready to leave long commutes and heavy traffic behind? We are too. We're planning for a future of safe, reliable and climate-conscious travel.

WHERE

Intercity passenger rail service will connect travelers across Colorado's Front Range with stations in Fort Collins, Loveland, Longmont, Boulder, Denver, Littleton, Castle Rock, Colorado Springs and Pueblo.

WHY

By 2050, an additional 3 million people are expected to live and commute along Colorado's Front Range. Front Range Passenger Rail will provide a relaxed and efficient transportation option, increasing accessibility to housing, employment opportunities and key destinations.

WHEN

The Front Range Passenger Rail District (District) is modeling service frequency, infrastructure, operation costs and financing needs. Daily passenger rail service is expected to launch within the decade.

HOW

The Colorado Legislature created the District to construct and operate a passenger rail system along the Front Range. Using existing tracks expedites the service start date. New passenger rail programs and expanded federal funding create a once-in-a-lifetime opportunity to bring passenger rail to Colorado's Front Range.
